Maps and Multimedia widgets

Where are the multimedia widget in the mapping widget, and what can I do with them? Multimedia widget has been around in 6.5, but got and upgrade in 6.6 and Mapping got its widget and an upgrade in 6.6. At Rhode Island DOT, we use BrM as the holder of our bridge information, and we allow access to many different groups of people. Therefore we have created many different roles in BrM. These roles can only see certain portions of it and only have specific interactions with BrM. This makes the use of widgets extremely useful.

Fun with the Mapping Widget

The mapping widget is an icon that can be placed on most visual form editor pages.
This widget will make a pop out of the map page,
giving you access to the mapping page without having to navigate to it.
